

# ELECTRONIC DATA INTERCHANGE (EDI) SOLUTION

**Connect, Integrate, Manage,  
Expand, and Validate  
Healthcare E-Business**

**Cost effective easy-to-use Electronic Data Interchange (“EDI”) Solution that allows Healthcare organizations to participate in E-Commerce with no software purchase or installation.**

- **Data Validation**—Enhances Healthcare organizations’ supply chain efficiency through automated “real-time” information. Provides organizations with the opportunity to make informed business decisions to accept or reject incoming documents such as acknowledgments, shipping notifications, and invoices.
- **Electronic Trading Network**—Combines secure electronic document delivery with a web-based interface to manage trading partnerships and transactions. Leverages the internet to reduce costs and increase visibility to maximize the value of conducting business electronically.
- **Web-Based EDI**—Supports vendors that are currently not capable of receiving and sending electronic trade documents. Allows vendors to support healthcare organizations’ E-Commerce initiative with no required software installation and maintenance.

## DATA VALIDATION:

Provides healthcare organizations with a customized external business rules engine which ensures data integrity and automates the integration of approved data into an organizations’ internal system.

- Provides “real-time” information.
- Empowers organizations to manage by exception.
- Detects errors before shipment or invoicing.
- Provides capability to accept or reject advance ship notices and invoices with comments.
- Provides alerts for over or under shipments.
- Ensures quality and format.

## ELECTRONIC TRADING NETWORK:

Consists of a Business to Business Electronic Commerce network which combines secure electronic document delivery with a web-based interface to manage vendor partnerships and document control.

- Connects electronically to all participating vendors cost effectively and securely using the internet.
- Manages trading communities and documents using a web based interface.
- Saves money by using private networks with no long term contracts and monthly minimums.

## WEB-BASED EDI:

Allows vendors of all sizes to access information safely and securely through the Internet and to reduce costs by eliminating the need to purchase expensive software and Value Added Network Services.

- Removes the complexity of implementing EDI functions by allowing users to access and process business documents rather than EDI data.
- Sends automatic notifications when vendors do not promptly receive or acknowledge purchase orders.
- Provides vendors with access to a cost effective EDI solution at no cost to the organization.
