

# ENERGY MANAGEMENT

**EXPERIENCE THE  
LEAN ENERGY  
OPERATION VALUE!**

**MDR's™** Energy Management Solution provides a world-class cloud-based technology with big-data analytics to help organizations sustain lean energy operations.

A proprietary data model looks at energy-consumption systems to deliver site-specific, customized services in real-time resulting in increased productivity, waste-elimination, fast anomaly detection, and continuous improvement.

## KEY SOLUTION FEATURES:

- **Real-time Operational Improvement and Ongoing Commissioning**— Cloud-based software with easy-to-read navigation system continuously runs multi-factor engineering analysis and fault detection behind the scenes.
- **Live Action Alerts**— Provides recommendations in real time to system operators and maintenance personnel.
- **Cost-Savings Visibility**— Generates reports on how well recommendations are being implemented along with cost savings calculators that measure to the exact dollar amount the financial impact of these implementations.
- **Automation System Neutral**— Operates seamlessly with all known building automation systems (BAS), management and control systems. This is not a BAS replacement, but a data-driven technology collecting information from meters and sensors at every part of the energy system and intelligently processing that data.
- **Non-Invasive**— Cloud-based, hosted solution receives data from client systems. Client servers stay secure as there is no need for reaching in or accessing assets onsite.
- **Quick Implementation**— Can be up and running within 3 weeks!

## HIGHLIGHTS:

- High Return on Investment, low cost program driven by proprietary software
- Includes excellent real-time management reporting tool
- Tracks and verifies financial results
- Empowers leadership to hold employees accountable for their actions
